

Equus® Stable Treatment Testimonials

I own a Quarter Horse breeding ranch and have used Equus Stable Treatment since the beginning of the 2008 breeding season. I am very pleased with the results. I have used Equus Stable Treatment in the stallion barn, breeding barn, and the foaling barn.

In the stallion, breeding and foaling barns, Equus Stable Treatment has helped eliminate the ammonia build up and smell. It was especially noticeable when we ran out of Equus Stable Treatment for a couple of weeks. The ammonia smell came back. After we received the new Equus Stable Treatment and treated the areas the ammonia smell disappeared quickly. Equus Stable Treatment helps to keep the stalls a lot fresher which is better for the horses and the people working with them.

I am very pleased with the service and the product. I would recommend it to any of my colleagues.

I use Equus Stable Treatment in my stalls. I have found it to work great in the Winter time when my barn is all shut up. It really stops all ammonia smell. I recommend you to use Equus Stable Treatment in your stall barns.....

Equus Stable Treatment helps freshen up the barn and eliminate the ammonia smell. Even in the cold weather when you need to keep the barn closed up the air is fresher and healthier for both the people and horses. With the once a week application, the air stays refreshed.

NRHA Judge

I used Equus Stable Treatment in March when the weather was cold and the barn was closed up. Normally ammonia will tend to build up during these times. While I used Equus Stable Treatment the ammonia smell was greatly reduced. It was healthier for the horses, easier for us to be inside and the barn did not have the ammonia smell when customers came to look at horses. Equus Stable Treatment worked very well for us.
